Neighbor Services — Newly Added Features

Release Notes & Technical Feature Summary (Version 1.0.6)

Application: Neighbor Services

Version: 1.0.6

Object Storage (CAS): GoStore (`file.proleadsolutions.co`)

Android Package ID: `com.proleadsolutions.nsapp`

iOS Bundle ID: `com.neighborservicesolutionsllc.nsapp`

Scope: Mobile App (Flutter), Backend API (Go), Admin Portal

1. Job Video Attachments & Instant Background GoStore Upload

- **30-Second Job Videos:** Seekers can now record or pick a video up to 30 seconds long when creating or updating a service request to visually demonstrate the task to providers.
- **Automatic Background Video Compression:** Videos over 1.5 MB (such as 8-second 18 MB camera clips) are automatically compressed in the background at 720p / 24 fps down to ~1.5–2.5 MB before uploading, saving bandwidth and mobile data.
- **Direct Streaming to GoStore (file.proleadsolutions.co):** Media streams directly to GoStore Content-Addressed Storage (`/v0/b/neighborservice/o`) with automatic fallback to `/media/upload` .
- **Instant Request Submission:** Pre-uploading begins the moment a user selects a video or photo. When the user taps Create Request or Save & Update Request, the request posts instantly without waiting for video compression or upload; any in-flight media finishes syncing in the background and automatically updates the request.
- **Live Progress & File-Size Badge:** Real-time status badge displays compression progress, upload percentage, and reduced file size (e.g., `2.1 MB (was 18.0 MB)`).
- **In-App Video Player Widget:** Custom video player with thumbnail preview, play/pause, scrubbing, mute toggle, and full-screen playback on request cards and detail screens.

2. 30-Day Free Trial & Redesigned Provider Subscriptions

- **30-Day Free Trial Activation UX:** Added full-screen loading overlay (*"Activating your 30-day free trial..."*) and detailed error feedback during free-trial activation so users have immediate visual confirmation.
- **Trial Eligibility & Checkr Status:** Added `CheckrTrialStatus` model and backend eligibility verification to ensure seamless trial onboarding.
- **Unified Subscription Management:** Redesigned `SubscriptionPage` with tier comparison cards, native Apple App Store & Google Play Billing integration, and direct links to platform subscription management.

3. End-to-End Refund Request & Dispute Resolution System

- **In-App Refund Requests:** Added `RefundRequestBottomSheet` and `RefundRequest` model allowing users to submit structured refund requests with reason codes and supporting notes on funded appointments.

- **Admin Portal Refunds Dashboard:** Added a dedicated Refunds management module in the Admin Portal (`/refunds`) to review, approve, reject, and process Stripe/escrow refunds with full audit logging.
- **Backend Refund Engine:** Added refund repositories, use cases, and REST endpoints in `backend-go` with automated notification triggers.

4. Interactive Role-Based Onboarding Experience

- **Redesigned Onboarding Flow:** Added a rich multi-step `OnboardingPage` featuring tailored previews for both Service Seekers and Service Providers, highlighting AI job creation, verified pros, Flash Dispatch, and secure escrow payments.

5. Canadian & US Background Check Support (Checkr)

- **Cross-Border Provider Verification:** Extended Checkr background check integration to support Canadian providers alongside US providers, with dynamic country and province resolution and package selection (`CHECKR_CANADA_PACKAGE_NAME`).

6. AI Request Assistant & Granular Job Matching

- **AI Auto-Fill Assistant:** Enhanced the AI Request Assistant modal to automatically populate request title, detailed description, service category, schedule, and market-rate budget hints from natural-language prompts.
- **Specialty, Service Location & Urgency Controls:** Added specialty tags per service category, service location mode (Customer Location, Provider Location, or Remote / Online), and urgency selection (Scheduled vs. Urgent / Flash Dispatch).

7. Platform Packaging & Infrastructure Updates

- **Split Android / iOS Package Identifiers:** Configured Android to use `com.proleadsolutions.nsapp` across Gradle, Kotlin, Firebase, Google Play Billing, and `assetlinks.json`, while preserving `com.neighborservicesolutionsllc.nsapp` for iOS and APNS.
- **Google Play Policy Compliance:** Configured zero-permission Android Photo Picker compliance and updated Gradle / JDK 24 build compatibility.

8. Provider About Page Metrics — Response Time & Trust Score (How It Works)

The Provider **About Page** (`about_page.dart`) displays a 4-column Hero Metrics Bar featuring **Rating**, **Identity**, **Response**, and **Trust Score** alongside provider attribute pills. Below is how Response Time and Trust Score work end-to-end:

8.1 Response Time (`Response` & Availability Tier)

- **Hero Metric Benchmark (`< 15m`):** On the About Page hero metrics bar, the **Response** card displays a fast-response indicator (`< 15m`) representing the platform's expected response benchmark rather than a dynamically averaged per-provider duration on the `Profile` entity.
- **Provider-Configured Availability & Response Time:** In *Edit Profile → Availability & Response Time*, providers select their operational response tier (`SCHEDULED`, `SAME_DAY`, or `EMERGENCY`), which renders directly below the hero bar as an attribute pill: **Scheduled**, **Same Day**, or **24/7 Emergency**.

- **Dispatch Telemetry:** Live response time tracking in minutes (`response_time_minutes`) is supported in backend admin telemetry models (`ProviderTelemetry`) for operational monitoring.

8.2 Trust Score (`neighbor_score`)

- **About Page Display & Default:** The **Trust Score** metric reads `profile.neighborScore` (JSON field `neighbor_score`), defaulting to **500** for newly created or unscored profiles.
- **Automated 6-Hour Scoring Engine (`ProviderRankingWorker`):** A Go background worker recalculates every provider's `neighbor_score` on startup and every **6 hours** on a clamped scale of **100 to 1,000**:

> **Trust Score Formula (Clamped 100 – 1,000):**
>
> - **Base Score:** `300` points
> - **Completed Jobs Bonus:** `+15` pts per completed appointment (capped at `+300` pts / 20 jobs)
> - **Average Rating Bonus:** `average_rating × 40` (up to `+200` pts for a 5.0 rating)
> - **Review Depth Bonus:** `+5` pts per review (capped at `+100` pts / 20 reviews)
> - **Verified Identity Bonus:** `+100` pts when `is_identity_verified` is `true`
> - **Activity Streak Bonus:** `+2` pts per streak day (capped at `+50` pts / 25 days)
> - **Dispute Penalty:** `−50` pts per dispute where the provider is the defendant

- **Provider Tiers & Rewards:** Scores map to four tiers: **Bronze** (100–449), **Silver** (450–699), **Gold** (700–899), and **Platinum** (900–1,000). Crossing `700` (Gold Tier) automatically sends a push notification, in-app alert, and congratulatory email announcing priority search placement.
- **Search Ranking & Sentiment Adjustment:** Providers are ordered in discovery/popular feeds by `neighbor_score DESC, average_rating DESC, total_reviews DESC` . Additionally, `ProviderSentimentWorker` analyzes review sentiment via `aimatcher` for active paid providers to factor review performance into `neighbor_score` .

9. Stripe Payment History, Details & Refund Execution (Admin Portal & Backend)

- **Full Payment Ledger Tracking (`payments_stripepayment`):** Every Stripe payment in the app—including appointment escrow funding, Checkr background checks, payment-sheet transactions, and Stripe webhook updates (`payment_intent.succeeded` , `charge.refunded` , `payment_intent.payment_failed`)—is automatically recorded and synchronized.
- **Admin Payment History Dashboard (`/admin/payments`):** Added a dedicated Payment History page with KPI summary cards, search, status/type filtering, one-click Stripe ID copy, pagination, live Stripe sync (`POST /api/v1/admin/payments/sync`), and CSV export (`/api/v1/admin/export/payments`).
- **Payment Details & Direct Refund Execution (`/admin/payments/:id`):** Added a Payment Detail page showing financial breakdowns, Stripe PaymentIntent/Charge IDs, linked booking/appointment context, refund audit trail, and an interactive modal to issue full or partial Stripe refunds directly from the details view (`POST /api/v1/admin/payments/:id/refund`).

10. Always Human-Readable Error Handling (Mobile App & Admin Portal)

- **HTML & Proxy Error Sanitization (`ErrorHandler`):** Upgraded `error_handler.dart` with `isHtml()` and `extractHtmlSummary()` to intercept raw HTML error pages (such as Nginx `405 Not Allowed` , `502 Bad Gateway` , `503` , `504` , or Cloudflare pages) and translate them into clear, user-friendly messages.

- **Technical & Stack-Trace Filtering:** Automatically scrubs Go panics, SQL/GORM errors, Dio internals, and Dart stack traces across `AuthenticationRemoteDataSourceImpl`, `LoginAuthPage`, and `DialogUtils`, while preserving dedicated account-suspension routing (`ACCOUNT_SUSPENDED`).
- **Admin Portal Friendly Network Errors:** Added `extractErrorMessage()` in `PromosComponent` so raw browser errors like `Failed to fetch` or expired-session `401` responses display clear actionable guidance.

11. Multi-Environment Flutter Configuration & Packaging

- **Environment Asset Bundling (`pubspec.yaml`):** Registered `assets/.env`, `assets/.env.dev`, `assets/.env.stage`, and `assets/.env.prod` so all environment files are packaged into Flutter release and debug builds.
- **Dynamic Environment Loader (`lib/main.dart`):** Updated `bootstrap()` to resolve `AppEnvironment.dev`, `stage`, or `prod` from target entrypoints (`main_dev.dart`, `main_stage.dart`, `main_prod.dart`) or `--dart-define=ENV=...`, loading the matching `assets/.env.<env>` file with graceful fallback to `assets/.env`.

12. Database Auto-Migration Resilience (Admin & Billing Tables)

- **Missing Admin Table Coverage (`database.go`):** Registered `PromoCode` (`billing_promocode`), `StaffNote` (`admin_staff_notes`), `ApprovalRequest` (`system_approval_requests`), and `SurgePricingRule` (`pricing_surge_rules`) in GORM `AutoMigrate` and `ensureExplicitTables()` with explicit DDL and indexes so admin endpoints never fail with missing-relation errors (`SQLSTATE 42P01`) on fresh deployments.

Summary Matrix by Component

Feature Area	Mobile App (Flutter)	Backend API (Go) & Admin Portal
Job Video & Media	30s video picker, 720p/24fps compression (>1.5MB), non-blocking background upload, live progress badge, `VideoPlayerWidget`	Direct GoStore CAS streaming (`file.proleadsolutions.co`), MP4 duration validation, async video/image PATCH endpoints
Subscriptions	Redesigned `SubscriptionPage` , 30-day free trial loading state & error surfacing, Play Store / App Store deep links	Trial eligibility validation, Google Play & Apple receipt verification, webhook buffering
Refunds & Escrow	`RefundRequestBottomSheet` , refund status tracking on appointments & wallet	Admin Portal `RefundsComponent` , Stripe refund execution, audit trail logging
Trust & Onboarding & Trial	Interactive `OnboardingPage` , US & Canada verification forms	Checkr US & Canada package routing, dynamic country/province resolution
About Page Metrics (Response & Trust Score)	Hero metrics bar in `about_page.dart` displaying `< 15m` Response benchmark, `neighborScore` Trust Score (default 500), and Availability pills	`ProviderRankingWorker` (6-hour recalculation, 100–1000 scale, tier promotions) & `ProviderSentimentWorker`
Stripe Payment History & Refunds	Escrow funding, background check & PaymentSheet flows tracked end-to-end	`payments_stripepayment` ledger, webhook sync, Admin `/admin/payments` & `/admin/payments/:id` full/partial refunds, CSV export
Error Handling, Env Loading & DB	HTML/SQL/panic sanitization in `ErrorHandler` , dynamic `.env.dev/.stage/.prod` loading & asset bundling	Friendly fetch/session error handling in Admin Portal, explicit DDL & `AutoMigrate` for promo codes, staff notes, approvals & surge rules
